

Quiz Prep ...

$$17^2 = 289$$

$$b^2 + 8^2 = 17^2$$

$$b^2 + 64 = 289$$

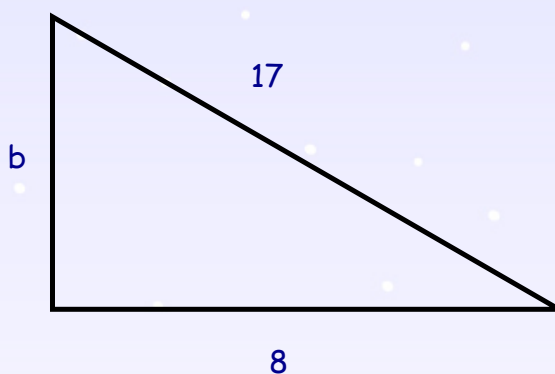

$$\quad \quad \quad -64 \quad \quad \quad -64$$

$$b^2 = \sqrt{225}$$

$$b = 15$$

Can the following be sides of a right triangle?

5, 8, and 13

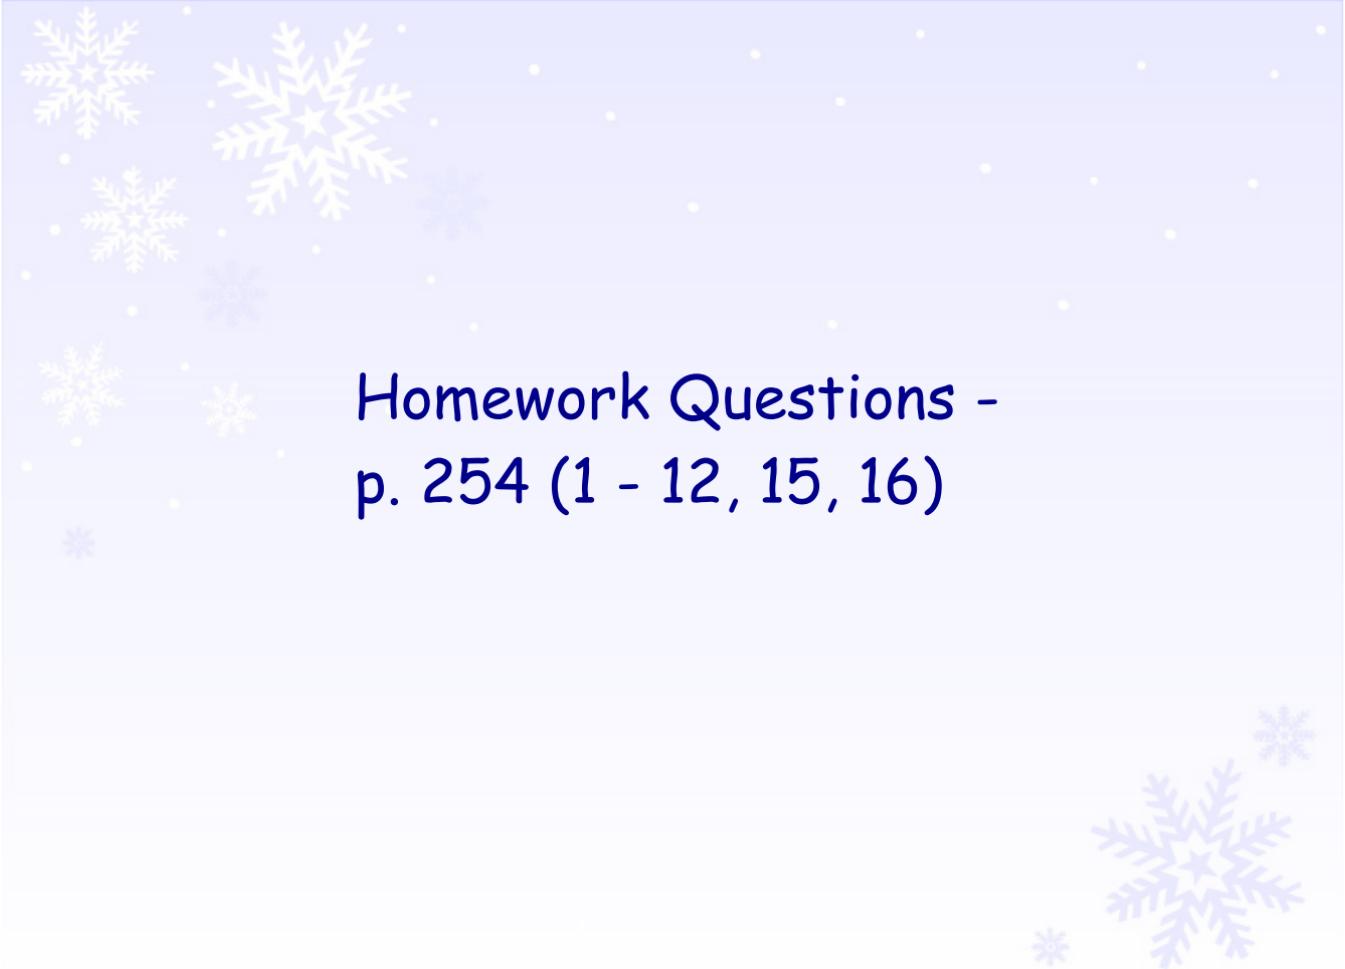

No.

$$5^2 + 8^2 \neq 13^2$$

$$25 + 64 \neq 169$$

$$89 \neq 169$$

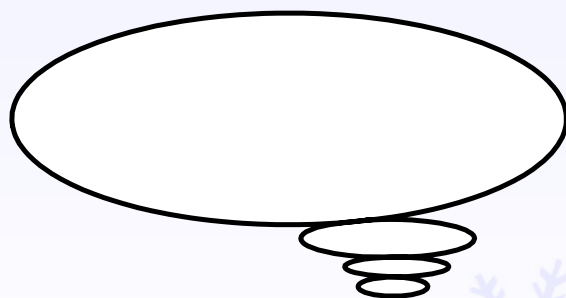

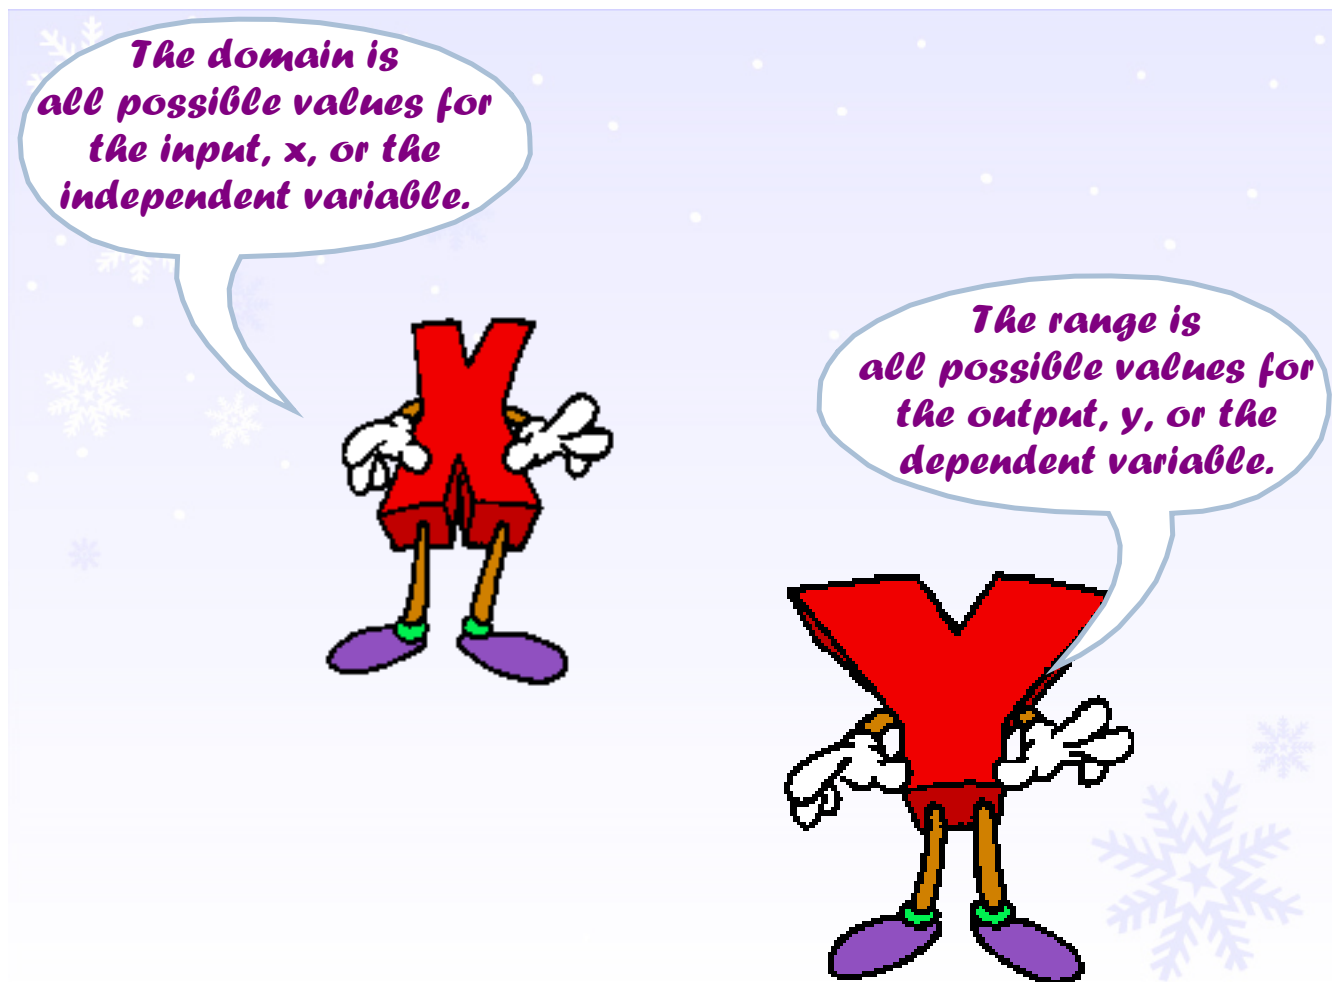

Homework Questions -
p. 254 (1 - 12, 15, 16)

Section 5.2 Relations and Functions

Remember in Section 1.4 that ...

Adding on to that ...

... a **relation** is a set of ordered pairs.

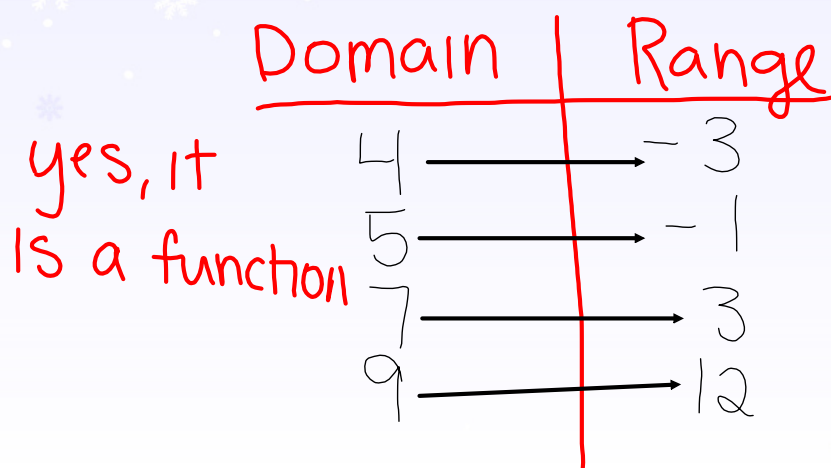

Determine if a **relation** is a **function**.

$(3, -1)$
 $(-2, 4)$

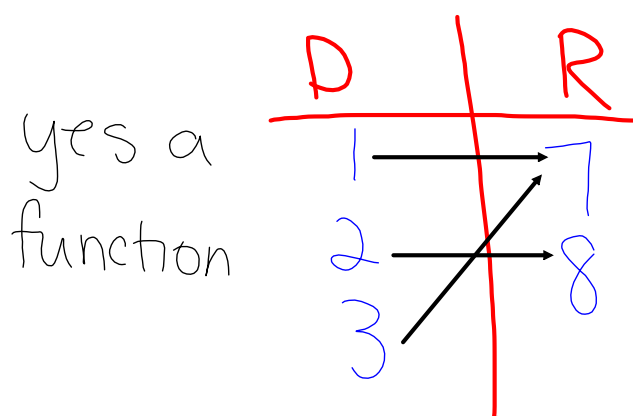

(x, y)

Using a mapping diagram to determine if a relation is a function . . .

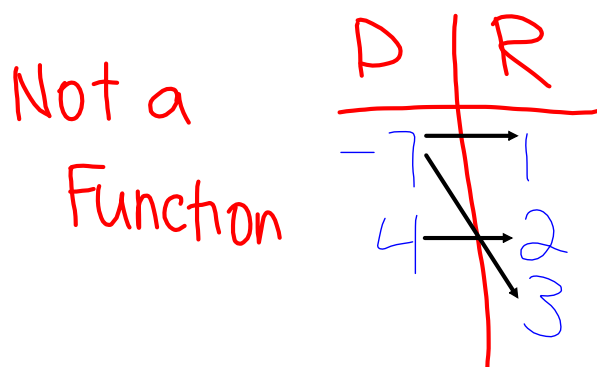

① $\{(4, -3), (5, -1), (7, 3), (9, 12)\}$

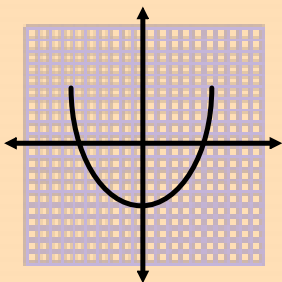

② $\{(3, 7), (2, 8), (1, 7)\}$

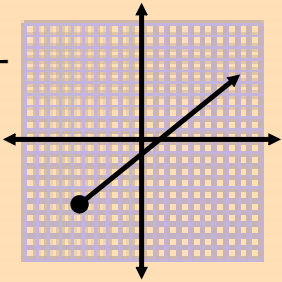

③ $\{(-7, 3), (4, 2), (-7, 1)\}$

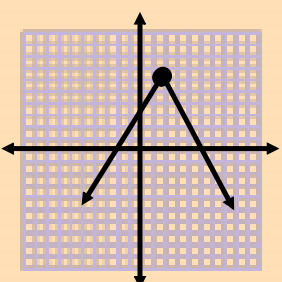

A. _____

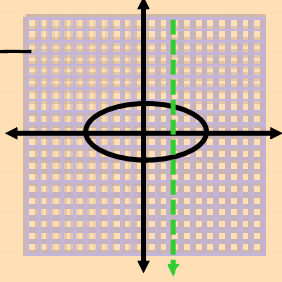

B. _____

C. _____

D. _____

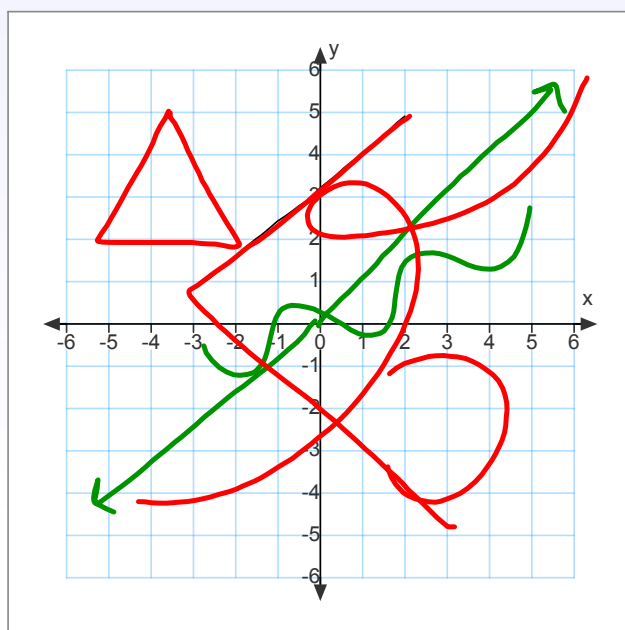

Or, use the **vertical line test**

If a vertical line intersects a line @ more than one point \neq Function

— = yes

— = NO

Evaluating Functions ...

$$f(x) = 3x - 4$$

$$f(2) = 3(2) - 4$$
$$= 2$$

$$\boxed{f(2) = 2}$$

$$\textcircled{2} \quad f(x) = -|x| - 3$$

$$D: \{-4, 3\}$$

$$f(-4) = -|(-4)| - 3$$
$$= -4 - 3$$
$$f(-4) = -7$$

$$f(3) = -|(3)| - 3$$
$$f(3) = -6$$

$$D: \{-4, 3\} \quad R: \{-7, -6\}$$

$$f(x) = -x^2 - 1$$

$$f(-2) = -(-2)^2 - 1$$
$$= -4 - 1$$
$$f(-2) = -5$$

Homework (to be handed in):

p. 259 (1 - 35 odd, 41)

⑨

x	$x + 7$	y
1	$1 + 7$	8
2	$2 + 7$	9
3	$3 + 7$	10
4
